**SPRAY FOAM**

**Renewable-based Spray Foam Insulation - Responsibly formulated for Superior Perform**

ICYNENE's next generation of high performance product, ICYNENE LD-R-50™, is a renewable-based, 0.5 lb., 100% water-blown foam insulation and air barrier material. ICYNENE LD-R-50™ exceeds the renewable content specification set by the USDA BioPreferredSM program and ICC-SAVE. Using high-yield castor oil material, ICYNENE LD-R-50™ reduces the need for petroleum-based polyol. Castor oil is a natural ingredient that is safe enough for use in personal care products such as lip balm. ICYNENE LD-R-50™ is an environmentally preferable product that is 100% water-blown and free from HFCs and PBDEs. It insulates and air-seals in one step for maximum energy conservation while minimizing the environmental impact during manufacturing and construction. Significantly reducing air leakage means ICYNENE LD-R-50™ contributes to a healthier, quieter and more comfortable indoor environment, while reducing energy consumption and related greenhouse gas emissions by as much as 50%.

Air Barrier

Renewable Resource

Moisture Management

**CASTOR OIL: Environmental Overview \***

- Castor oil is 100% naturally filtered, no chemical additives required
- Castor crops are non-irrigated (relying only on natural rainfall), saving scarce water supplies
- Castor beans do not require pesticides or fungicides
- Production process has low energy dependence, consisting of simply de-husking and pressing. Harvesting is manual.
- The castor oil used has a yield (by weight) of ~40% vs. ~17% yield with soya oil
- Castor beans do not compete with food crops, as castor plants can be grown on marginal lands, which are not competitive with food production lands.
- Castor is a rapidly renewable material, as per USGBC definition, requiring a 10-year or less re-growth timeframe

**NEW ECONOMIC STIMULUS BILL TO HAVE A POSITIVE IMPACT ON ICYNENE**

Extend the 25C existing home remodeler credit through the end of 2010, increase the credit rate from 10% to 30%, increase the maximum credit cap from \$500 to \$1,500, and expand the set of qualifying property. Homeowners will now be able to get a tax credit of 30% of the material cost (labor and overhead cost to install is not allowed) of approved categories of building envelope improvements of which ICynene qualifies. The Maximum tax credit allowed would be \$1500.
